eliangius@gmail.com
eangius.github.io

Collaborative machine-learning lead with 12+ years building data products & tech teams across Apple Maps' global scale & 0–1 startups. Combines hands-on modeling & architecting with mentoring scientists & engineers. Bridge applied research-to-production gaps across the full stack, from hypothesis to deployed system. Specialized in location intelligence, semantic modeling & information retrieval.

EXPERIENCE

Lead Data Scientist → Manager — Apr 2024 – May 2026
Summer (short-term-rental analytics) — Remote

- First DS hire: grew & managed a team of 4 (engineers, scientists, contractors) on exploratory ML & ETL delivery. Ran 1:1s, sprint-planning, design & code reviews.
- Led data product roadmap, quality & budget for a 2.5M+ listings scrape pipeline – partnered with leadership to realign ML as business priorities shifted.
- Directed implementation of company's 1st agentic RAG chatbot serving property owners – scoped use-cases & built automated LLM benchmarks to set release quality.
- Deployed occupancy classifier trained on scraped daily calendars (94% F1) – replacing third-party suppliers & improving financial estimates.
- Prototyped explainable AVM regression & price forecasting simulator (4% MAPE) – on-the-fly training to avoid market drift & reduce MLOps overhead.

Founder & Tech Lead — Jan 2021 – Apr 2024
Affectra / SaferRoute (geo-emotional insights) — Montreal, QC

- Created neighbourhood *vibe* maps combining sentiment analysis, topic modeling & influence graphs from 80k weekly streaming media & demographic events – validated with paying B2B pilots.
- Designed MVP of a real-time pedestrian safety routing service fusing live retail signals, street traffic & historical crime – tech asset sale.
- Owned research & product scope trade-offs against a fixed runway, pivoting based on market feedback.

Senior ML / Data Engineer — May 2019 – Oct 2020
LocalLogic (real-estate & urban insights) — Montreal, QC

- Optimized core geospatial search & scoring algorithms while migrating to AWS infrastructure (4x production throughput).

SKILLS

ML Methods
predictive modeling
forecasting
deep learning
agentic systems
model explainability

Applied Research
rapid prototyping
exploratory analysis
hypothesis & A/B testing

Domain Expertise
location intelligence
information retrieval
knowledge graphs
vector embeddings
search ranking

Project Leadership
agile roadmapping
cross-functional scoping
stakeholder demos

TECHNOLOGIES

Programming
Python, SQL,
Bash, JQ, Scala

ML Libraries
Scikit-Learn, TensorFlow,
Numpy, Pandas, SHAP

LLM & Agents
Pydantic, HuggingFace,
PgVector, RAGAS,
ClaudeCode

Geospatial
QGIS, PostGIS, OSM

Visualization
Jupyter Notebooks,
Plotly, Tableau, Grafana

- Grew the team from 1 to 4 developers. Coached junior staff while fostering data-driven & knowledge-sharing culture.

ML Engineer → Senior ML Engineer Jun 2013 – May 2019
Apple Maps (points of interest) Cupertino, CA

- Employee #2 of the new POI team. Interviewed & onboarded 10+ engineers & researchers; mentored 3 intern exploratory projects.
- Tech lead for the POI conflation algorithm (100M+ global businesses), coordinating requirements & implementation across client & supplier teams: Siri, ApplePay, QA, Ingest & Editorial.
- Developed an ML explainability framework diagnosing production failures as training gaps, distribution shifts, or domain outliers – adopted by 3 POI projects.
- Trained brand clustering & POI tagging models that enriched the ingestion feed (91% F1) – standardising search & UI experience.
- Automated ML cleanup of stale POI editorial corrections – reducing contractor costs by 10%.

Natural Language Processing Scientist Mar 2013– Jun 2013
Locationary (startup acquired by Apple) Toronto, ON

- Prototyped text streaming pipelines for normalizing, cleaning & enhancing the quality of 250k+ business listings via NLP & regex.
- Built ML business listing classifiers, multilingual entity-recognition & custom knowledge graph components.

Applied Researcher May 2011 – May 2013
Semantic Software Lab (graduate placement) Montreal, QC

- Developed experimental NLP plugins for word-processors & IDEs – validated research hypothesis via usage telemetry.

Big Data
PostgreSQL, Redshift, Solr, Mongo, S3

Infrastructure
GitHub Actions, DVC, Docker SageMaker, Airflow, AWS Glue, Kafka, Spark, FastAPI

EDUCATION

M.Sc. Applied Computer Science
Concordia University
Research: Software Traceability (all but thesis)

B.Eng. Software & Business Management
McMaster University
5-yr internship program

NextAI Bootcamp
2022 Startup Cohort

PERSONAL

Fluent in English & Spanish
Canadian & E.U. citizen
